

Diabetic patient with collapse of the arch and severe charcot foot deformity who presented with failed attempt at midfoot fusion. The alignment was restored by removing a wedge of bone from the midfoot and subsequent fusion. Bone graft was also used to maximize the likelihood of fusion along with appropriate plate and screw size.

Diabetic patient with collapse of the arch and severe charcot foot deformity who presented with failed attempt at midfoot fusion. Realignment was restored by removing a wedge of bone from the midfoot and subsequent fusion. Bone graft was also used to maximize the likelihood of fusion along with appropriate plate and screw size.
